## DETAILED ACTION

### *Drawings*

The drawings are objected to because figure 1 indicates 12L as being lower wall whereas the specification indicates 10L as being lower wall (see page 4 paragraph [022] second to last line). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as “amended.” If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled “Replacement Sheet” in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: 10L. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is

being amended. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Specification***

The disclosure is objected to because of the following informalities: First the specification indicates 12L and 10L to be the lower wall (see page 4 paragraph [022] second to last line) where as figure 1 indicates 12L as the lower wall. Second on page 5 paragraph [028] first line the applicant states "In other words, such as illustrated in Fig ?". The applicant must indicate which figure the applicant is referring to.

Appropriate correction is required.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2 and 3 are rejected under 35 U.S.C. 102(b) as being anticipated by Gleockler, Referring to claim 1, Gleockler discloses an air conditioner for a face mask that comprises a body having at least one side wall and a bottom wall forming an enclosed space open at an upper portion of the body (see figure 1), the upper portion of the body being adapted to generally conform to contours of a lower part of the patient face (see figure 1), an air chamber formed in

Art Unit: 3743

an upper part of the body and having an exhaust vent for exhausting the patient's exhaled air to an exterior space (see figure 1), an ice reservoir formed in a lower part of the body to contain ice and melt-water from the ice (see figure 1), and an air passage connected from the exterior space and passing through the ice reservoir to conduct air to the air chamber (see figure 1), wherein intake air is drawn from the exterior space and through the air passage into the chamber when the patient inhales air from the chamber such that the intake air in the air chamber is cooled and moisturized air from by the ice in the ice reservoir, so that the patient inhales cool, moisturized air from the air chamber (see figure 1), and exhaust air exhaled by the patient is vented from the air chamber through the exhaust vent (see figure 1).

Referring to claim 2, Gleockler discloses an apparatus wherein the air passage further comprises a one-way intake valve formed of a self-hinged membrane of resilient material (see column 1 lines 60-67).

Referring to claim 3, Gleockler discloses an apparatus wherein the exhaust valve comprises a self-hinged membrane of resilient material (see column 1 lines 6-67).

***Allowable Subject Matter***

Claim 4 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 3743

***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
